Spartacus Training

Day 5

Recap.

We have learnt about CMS components and customization.

Now in this session we are going to learn on how to customize the Config Module in Spartacus application.

Global Configuration.

Goal

- Understand and use the ConfigModule

- Build a custom Feature Configuration

Global Configuration.

Use the withConfig method to add configuration. Use the specific configuration class to gain type-safety. Configurations can be added in sub modules.

The withConfig exists also on the Storefront modules.
